Online Resource 3 Infiltration of different immune cell subpopulations in immunohistochemically stained tumor tissue of breast cancer patients. a, b: tumor centers with low and high CD3+ TILs, respectively. c, d: invading margin of tumors with low and high CD3+ TILs, respectively. e, f: tumor centers with low and high TILs, respectively. g, h: invading margin of tumors with low and high TILs, respectively. i, j: shows low and high TILs in CT, respectively. k, l: examples of low and high lymphocytic infiltrations in invasive margin of breast tumors, respectively. Images m, n as well as images o, p illustrate low and high infiltrations of TILs in CT and IM of breast tumors of IDC subtype. All images are taken at 200× magnification. TILs: tumor infiltrating lymphocytes, CT: center of tumor, IM: invasive margin, IDC: infiltrating ductal carcinoma
